Summary

Computer Science undergraduate with a strong interest in software development and problem solving. Skilled in Java and Python with hands-on experience building projects involving backend logic and databases. Currently focused on improving Data Structures and Algorithms and developing practical applications.

Education

MLR Institute of Technology, Hyderabad B.Tech in Computer Science	2023 – 2027 CGPA: 8.37
Narayana Junior College Intermediate	2023 96%
Tejaswi Concept High School SSC	2021 100%

Skills

- **Programming:** Java, Python, C, JavaScript
- **Core CS:** Data Structures, Algorithms, OOPS, DBMS, Operating Systems
- **Technologies:** Node.js, REST APIs, Git, Linux
- **Databases:** SQL, MongoDB

Projects

An Intelligent Greeting and Guidance Robot Using Simulated Autonomous Navigation and AI-Based Speech Generation

- Built a software-based system that greets users and provides directions using face recognition and AI-based speech generation
- Designed and tested navigation logic in a simulated setup; autonomous navigation planned as a future enhancement

Holiday Booking Platform

- Developed a web application to compare and select travel packages based on user preferences and budget
- Implemented backend logic and database integration for managing user data efficiently

Inventory Management and Reporting System

- Developed a system to manage inventory, track sales, and generate reports for better monitoring
- Designed database structure using SQL and implemented features to simplify daily operations

Experience

Infosys Virtual Internship – Java Development Virtual

- Built an Inventory Management and Reporting System as part of internship work
- Implemented features to manage stock, track transactions, and generate reports using Java and SQL
- Gained hands-on experience in backend development and database handling

Certifications

- MongoDB Basics for Students — MongoDB University
- Generative AI — Google Cloud
- Python Essentials — Cisco
